

# Bottle Sealing Components

Uni-Spray seals are the product of choice for leading breweries, wineries and soft drink bottlers around the world.

Our experience over the past 20 years has provided us with a thorough understanding of customer requirements in today's high-speed bottling environment, enabling us to manufacture replacement parts which offer major advantages over alternative products.

We use the highest quality materials and cutting edge technology to provide our customers with products that are not only superior in performance but are also long-lasting. The result: fewer replacements and fewer shutdowns, providing increased line efficiency and significant bottom line savings.

Uni-Spray seals have been chosen by numerous high-profile companies as replacement seals in high-speed bottle filling lines.

We produce and market many specialized high-quality injection molded plastic parts. Many Uni-Spray seals are made from polyurethane, molded to exacting standards. This extremely wear-resistant material is available in various colors, and durometers.

## FEATURES

- Unique polyurethane design
- Longer service life (in most cases, 2-4 times as long as alternatives)
- One-piece seal systems (replaces centering cup, sealing rubber & cup retaining clips)
- Colour-coded multi-purpose seals can be used for many applications
- Innovative & complimentary products available

## BENEFITS

- Shorter changeover time to different bottle sizes
- Lower cost for seals, smaller inventory, less order processing and receiving
- Reduced possibility of glass inclusion
- Lower maintenance cost
- Custom development at very competitive costs
- Considerable bottom line improvement

WORLD LEADER IN COST-EFFECTIVE INDUSTRIAL SPRAY APPLICATIONS AND HIGH-SPEED PACKAGING LINE WEAR PARTS.
